EQUITY VALUATION REPORT

Reliance Industries Limited

Financial Modelling & Valuation

VALUATION DATE
22 October 2026

FINANCIAL PERIOD
FY2025–26

METHODS
DCF · Trading comps · SOTP

PREPARED BY
[Author Name]

Independent academic valuation exercise. Not produced, reviewed or endorsed by Reliance Industries Limited.
Cover artwork is an original illustration, not a photograph of a Reliance site.

CONTENTS

From reported results to valuation judgement

The report moves from what Reliance has reported, through what the model assumes, to what the valuation outputs can and cannot support. Every figure is drawn from the valuation workbook dated 22 October 2026; nothing has been recalculated.

1	Executive summary	3
2	Business mix and segment economics	4
3	Historical performance	5
4	Forecast and assumptions	6
5	Discounted cash flow valuation	7
6	DCF sensitivity	8
7	Trading comparables	9
8	Sum-of-the-parts valuation	10
9	Valuation comparison	11
10	Risks and model limitations	12
11	Conclusion	13
12	Sources, methodology and model integrity	14
A	Appendix — historical financials	15

HOW TO READ THIS REPORT

Observed — historical figures as reported in annual reports and recorded in the workbook. **Assumption** — forecast inputs chosen by the analyst. **Output** — values the model calculates from those inputs. **Interpretation** — the author's reading of the outputs. **Limitation** — open items flagged in the workbook or found on inspection. Display values are rounded; underlying workbook values are unrounded.

1 · EXECUTIVE SUMMARY

Two methods, two answers: the DCF lands below Reliance's market capitalisation and the SOTP lands above it

The workbook does not blend the methods, and neither does this report. The gap between them is the central analytical finding.

DCF IMPLIED EQUITY VALUE	SOTP IMPLIED EQUITY VALUE	MARKET CAP — REFERENCE ONLY
₹716,044 cr	₹2,077,051 cr	₹1,602,921 cr
WACC 10.0% · terminal growth 4.0% · TV 77.0% of EV	Segment EV ₹2,201,768 cr less net debt · illustrative multiples	₹1,184.5 × 1353.2473 cr shares; price to be verified

BASE-CASE ASSUMPTIONS (ASSUMPTIONS SHEET)

8.0% Revenue growth · p.a.	17.5% EBITDA margin · of revenue	10.5% Capex · of revenue	4.9% D&A; · of revenue
25.0% Tax rate · provisional	5.0% Working capital · of Δ revenue	10.0% WACC · provisional	4.0% Terminal growth · nominal

PRINCIPAL FINDINGS

- **Earnings scaled with the business.** EBITDA rose in every year from ₹123,684 cr in FY2022 to ₹207,911 cr in FY2026, and EBITDA margin on gross revenue ended at 17.7% against 15.7% at the start. *(Observed)*
- **The DCF is conservative relative to the market.** Market capitalisation of ₹1,602,921 cr sits above every cell of the DCF sensitivity grid, whose highest value is ₹1,454,951 cr (WACC 9%, growth 6%). Capex held at 10.5% of revenue against D&A; of 4.9% restrains free cash flow in every forecast year. *(Output and interpretation)*
- **Terminal value dominates the DCF.** 77.0% of the ₹840,761 cr enterprise value lies beyond FY2031, so the provisional WACC and terminal-growth inputs carry the result. *(Output)*
- **The SOTP leans on illustrative multiples.** Digital Services at 12.0× contributes ₹918,720 cr of ₹2,201,768 cr total segment EV; none of the multiples is market-derived. *(Output and limitation)*
- **Relative valuation frames rather than prices.** Reliance trades at 8.31× EV/EBITDA, between Indian Oil (3.88×) and Bharti Airtel (9.97×); the workbook computes no comps-implied value. *(Output)*

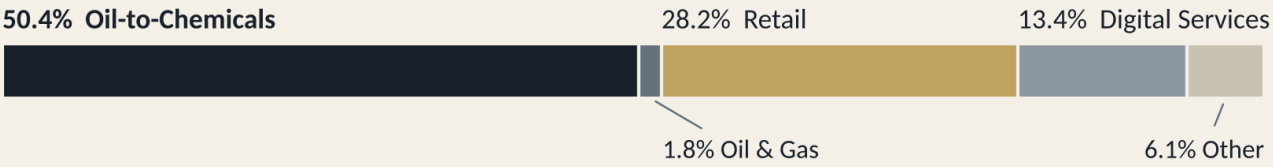

Source: Cover, DCF, SOTP_valuation, Trading_comps, Sensitivity_checks, Assumptions and Historical_financials sheets. Values in ₹ crore, rounded for display.

2 · BUSINESS MIX AND SEGMENT ECONOMICS

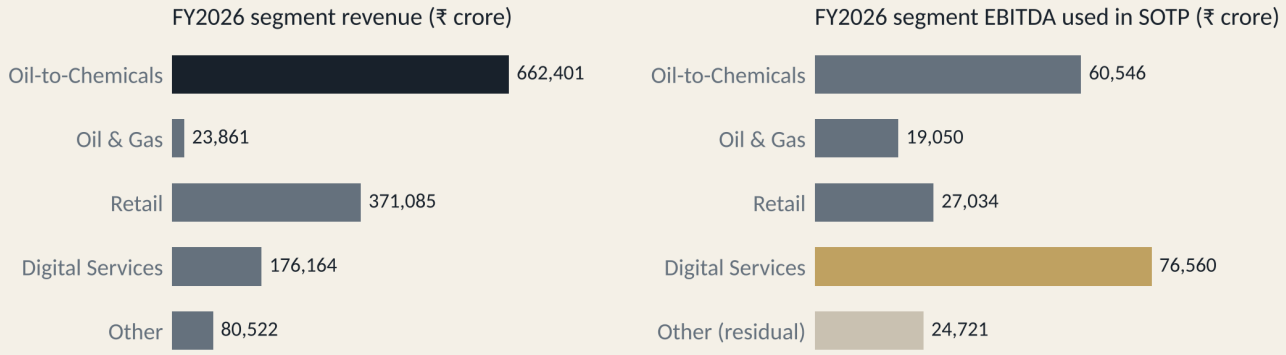

Oil-to-Chemicals generates half of segment revenue, yet Digital Services is the largest pool of segment EBITDA

A diversified conglomerate's value depends on which businesses earn the profit, not which book the revenue. That asymmetry is the case for a sum-of-the-parts view.

FY2026 SEGMENT REVENUE MIX — SHARE OF ₹1,314,033 CR BEFORE ELIMINATIONS

Segment revenue totals ₹1,314,033 cr. After inter-segment eliminations of ₹138,114 cr, consolidated gross revenue is ₹1,175,919 cr, which reconciles to the Historical_financials sheet.

Segment	Revenue (₹ cr)	Share	EBITDA (₹ cr)	Business description
Oil-to-Chemicals	662,401	50.4%	60,546	Refining, fuels and petrochemicals
Oil & Gas	23,861	1.8%	19,050	Oil and gas exploration and production
Retail	371,085	28.2%	27,034	Retail stores and commerce
Digital Services	176,164	13.4%	76,560	Telecom and digital services
Other / Eliminations	80,522	6.1%	24,721 ‡	Other business segments
Total before eliminations	**1,314,033**	**100.0%**	**207,911**	

INTERPRETATION

Oil-to-Chemicals contributes 50.4% of segment revenue but, on the EBITDA figures used in the SOTP, only ₹60,546 cr of ₹207,911 cr. Digital Services, with 13.4% of revenue, contributes ₹76,560 cr, the largest segment EBITDA. Because consumer-facing and infrastructure businesses typically attract different valuation multiples from commodity processing, a single consolidated multiple is likely to blur this mix; the SOTP in Section 8 addresses it, subject to its stated limitations.

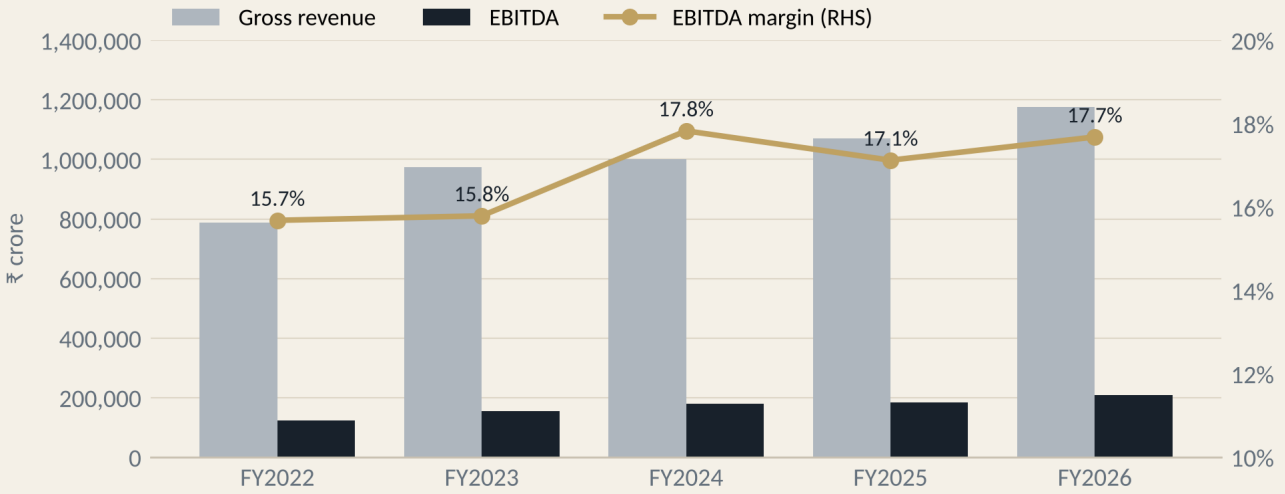

Source: Segment_analysis (revenue, share, descriptions); SOTP_valuation (segment EBITDA). ‡ The 'Other' rows differ by sheet: 'Other / Eliminations' for revenue vs 'Other / Unallocated (Residual)' for EBITDA, a residual plug that requires reconciliation to the FY2025–26 annual report.

3 · HISTORICAL PERFORMANCE

EBITDA grew every year from FY2022 to FY2026, with margin finishing at 17.7%

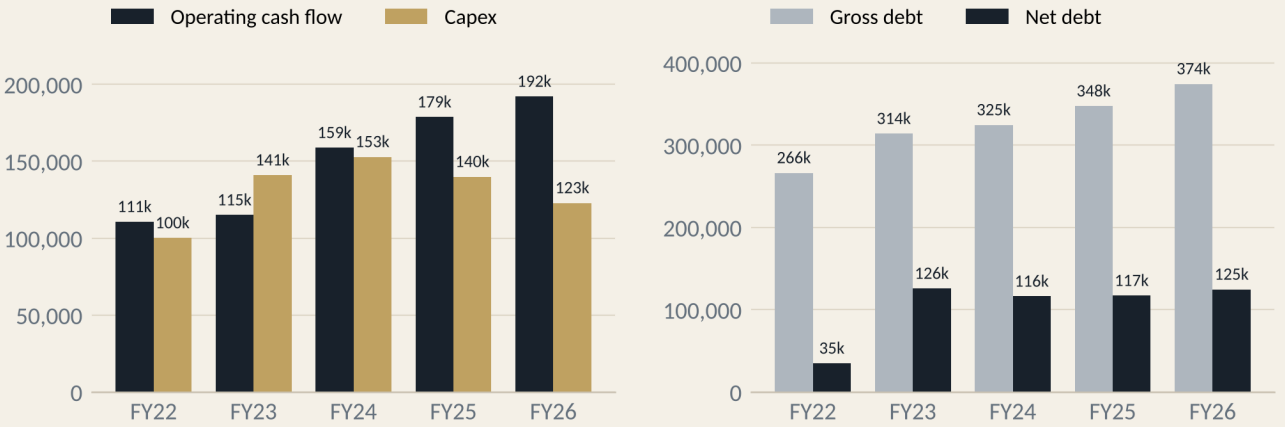

The FY2025 dip to 17.1% shows margins do not move in a straight line, which matters because the forecast holds them flat at 17.5%.

GROSS REVENUE AND EBITDA (₹ CRORE, LHS) AND EBITDA MARGIN (RHS), FY2022–FY2026

Gross revenue grew from ₹788,743 cr to ₹1,175,919 cr over the five years, and EBITDA from ₹123,684 cr to ₹207,911 cr. Margin peaked at 17.8% in FY2024. Profit after tax reached ₹95,754 cr in FY2026; the workbook asks for confirmation of whether this is total profit for the year or profit attributable to owners of the parent.

OPERATING CASH FLOW VS CAPEX, AND GROSS VS NET DEBT (₹ CRORE)

Capital expenditure exceeded operating cash flow only in FY2023 (₹140,988 cr vs ₹115,032 cr). From FY2024 operating cash flow covered capex, and by FY2026 it reached ₹192,113 cr against capex of ₹122,916 cr. Net debt has stayed between ₹116,281 cr and ₹125,766 cr since FY2023 while gross debt rose to ₹374,421 cr.

Data flags carried from the workbook. Net debt moves from ₹34,815 cr to ₹125,766 cr between FY2022 and FY2023, and total equity falls from ₹888,984 cr to ₹828,881 cr. The workbook asks for both definitions to be verified for consistency across years.

Source: Historical_financials (Reliance Industries Annual Reports FY2021–22 to FY2025–26, consolidated). Capex is the cash-flow-statement measure (PP&E;, spectrum and other intangibles), distinct from management-reported capex. Full table in the Appendix. Observed results.

4 · FORECAST AND ASSUMPTIONS

Revenue compounds at 8.0% and margin holds at 17.5%, lifting unlevered free cash flow from ₹44,191 cr to ₹60,121 cr

A ratio-driven forecast: every line after revenue is a fixed percentage, so the outputs inherit the assumptions directly.

₹ crore	FY2026A	FY2027E	FY2028E	FY2029E	FY2030E	FY2031E
Gross revenue	**1,175,919**	**1,269,993**	**1,371,592**	**1,481,319**	**1,599,825**	**1,727,811**
Revenue growth	*9.8%*	*8.0%*	*8.0%*	*8.0%*	*8.0%*	*8.0%*
EBITDA	**207,911**	**222,249**	**240,029**	**259,231**	**279,969**	**302,367**
EBITDA margin	*17.7%*	*17.5%*	*17.5%*	*17.5%*	*17.5%*	*17.5%*

EBIT	150,223	160,019	172,821	186,646	201,578	217,704
Tax on EBIT	37,556	40,005	43,205	46,662	50,394	54,426
NOPAT	**112,667**	**120,014**	**129,615**	**139,985**	**151,183**	**163,278**
Capital expenditure	122,916	133,349	144,017	155,539	167,982	181,420
Change in working capital	0 †	4,704	5,080	5,486	5,925	6,399
Unlevered free cash flow	**47,439**	**44,191**	**47,726**	**51,544**	**55,668**	**60,121**

† FY2026A working-capital change is hard-set to 0 and FY2026A D&A; is typed as 57,688; the FY2026A column is shown for reference and is not discounted.

ASSUMPTION REGISTER

Assumption	Base case	Status	Basis recorded in the workbook
Revenue growth	8.0%	ASSUMPTION	Below FY2026 actual growth (model: 9.8%); not company guidance.
EBITDA margin	17.5%	ANCHORED	Rounded from FY2026 actual of 17.7%.
Capital expenditure	10.5% of revenue	ANCHORED	FY2026 cash-flow capex ÷ gross revenue; verify line-item definition.
Depreciation & amortisation	4.9% of revenue	ANCHORED	FY2026 D&A; of ₹57,688 cr ÷ gross revenue.
Tax rate	25.0%	PROVISIONAL	Not verified as Reliance's normalised effective rate.
Working capital	5.0% of Δ revenue	PROVISIONAL	To be validated against historical working-capital movements.
WACC	10.0%	PROVISIONAL	To be built up from cost of equity, after-tax cost of debt and capital structure.
Terminal growth	4.0%	PROVISIONAL	Long-term nominal assumption; must stay below WACC.
Forecast period	5 years	—	FY2027E–FY2031E.

Because capex (10.5% of revenue) runs at more than twice D&A; (4.9%) in every year, the forecast implies continuous net investment. That is consistent with the recent capex cycle, but holding it into the terminal year embeds heavy reinvestment into perpetuity — a key driver of the DCF result.

Source: Forecast and Assumptions sheets. FY2026A links to Historical_financials; FY2027E–FY2031E are model assumptions applied to gross revenue. Forecast outputs, not guidance.

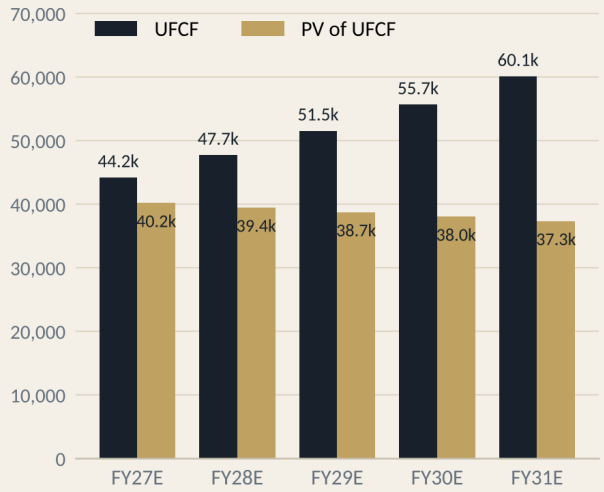

5 · DISCOUNTED CASH FLOW VALUATION

The DCF implies enterprise value of ₹840,761 cr, and 77.0% of it sits in the terminal value

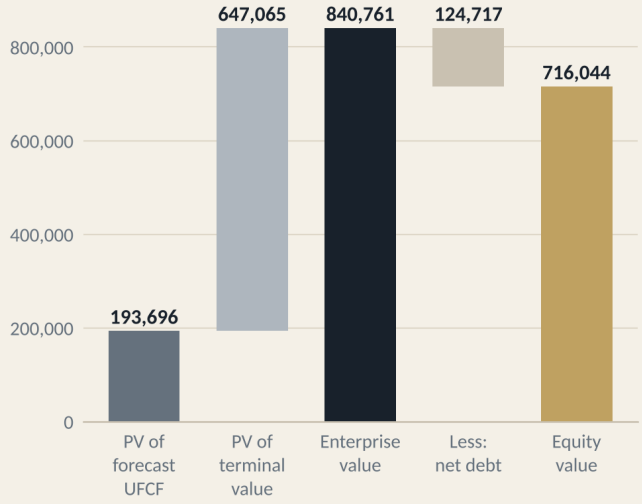

Equity value is ₹716,044 cr after FY2026 net debt. With most of the value beyond FY2031, the WACC and terminal-growth inputs carry the result.

₹ crore	FY2027E	FY2028E	FY2029E	FY2030E	FY2031E
Unlevered free cash flow	44,191	47,726	51,544	55,668	60,121
Discount period (years)	1	2	3	4	5
Discount factor @ 10.0%	0.9091	0.8264	0.7513	0.6830	0.6209
Present value of UFCF	**40,174**	**39,443**	**38,726**	**38,022**	**37,331**

FORECAST UFCF VS PRESENT VALUE (₹ CRORE)

Terminal value at FY2031E	**1,042,105**
× FY2031E discount factor	0.6209
Present value of terminal value	**647,065**

DCF valuation summary	₹ crore
PV of forecast UFCF	193,696
PV of terminal value	647,065
Enterprise value	**840,761**
Less: net debt (FY2026)	(124,717)
Equity value	**716,044**
Terminal value as % of EV	77.0%

Source: Forecast and DCF sheets. WACC (10.0%) and terminal growth (4.0%) are typed directly into DCF!B11:B12 rather than linked to Assumptions; values currently agree. No minority-interest or investment adjustments are made. Valuation output.

6 · DCF SENSITIVITY

Across WACC of 9–13% and terminal growth of 2–6%, DCF equity value spans ₹356,846 cr to ₹1,454,951 cr

Discount-rate risk dominates: at 4% terminal growth, one point of WACC either side of the base case moves equity value by six figures in ₹ crore.

DCF EQUITY VALUE (₹ CRORE) BY WACC AND TERMINAL GROWTH — OUTLINED CELL IS THE WORKBOOK BASE CASE

WACC ↓ / g →	2.0%	3.0%	4.0%	5.0%	6.0%
9.0%	643,684	745,093	887,064	1,100,022	1,454,951
10.0%	544,945	618,273	**716,044**	852,923	1,058,241
11.0%	468,232	523,238	593,959	688,254	820,266
12.0%	406,935	449,389	502,456	570,685	661,657
13.0%	356,846	390,368	431,338	482,552	548,397

READING THE GRID

- **Base case.** ₹716,044 cr at WACC 10.0% and terminal growth 4.0%, matching DCF!B19.
- **Discount rate.** At 4% growth, WACC of 9% gives ₹887,064 cr and 11% gives ₹593,959 cr.
- **Terminal growth.** At 10% WACC, growth of 3% gives ₹618,273 cr and 5% gives ₹852,923 cr. Effects compound towards the top-right corner, where the WACC–growth spread is narrowest.
- **Market reference.** Market capitalisation of ₹1,602,921 cr lies above the highest cell in the grid (₹1,454,951 cr). Within these ranges, WACC and terminal growth alone do not reach it; the operating assumptions — particularly capex intensity — also matter.

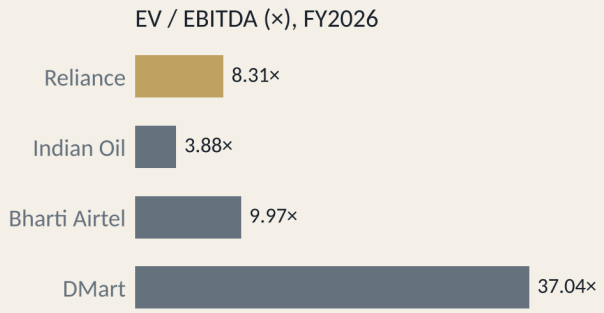

Source: Sensitivity_checks. The grid is stored as static values, not an Excel data table, and will not update if inputs change; the base cell and a 9% / 4% spot check agree with the DCF. Valuation outputs.

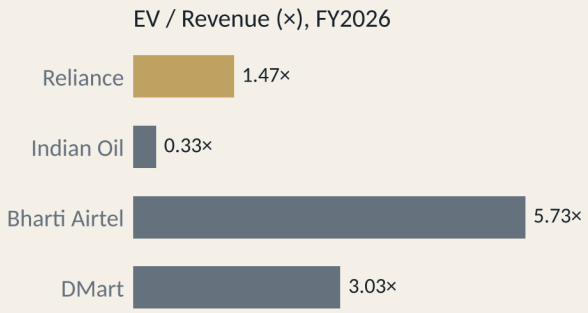

7 · TRADING COMPARABLES

At 8.31× EV/EBITDA, Reliance trades between Indian Oil (3.88×) and Bharti Airtel (9.97×) in the selected peer set

Each peer mirrors one Reliance segment, so the set frames a range rather than a single benchmark. The workbook computes Reliance's own multiples, not a comps-implied value.

₹ crore unless stated	Reliance	Indian Oil	Bharti Airtel	DMart
Share price (₹)	1,184.5	130.98	1,895	3,166
Shares outstanding (crore)	1,353.2473	1,377.156	580.9	65.19
Market capitalisation	1,602,921	180,380	1,100,806	206,392
Net debt	124,717	118,356	107,949	1,804
Enterprise value	**1,727,638**	**298,736**	**1,208,754**	**208,196**
FY2026 revenue	1,175,919	901,453	210,973	68,821
FY2026 EBITDA	207,911	77,062	121,268	5,621
EV / Revenue	**1.47×**	**0.33×**	**5.73×**	**3.03×**
EV / EBITDA	**8.31×**	**3.88×**	**9.97×**	**37.04×**

COMPARABILITY WARNINGS

- Each peer maps to a single Reliance segment — Indian Oil to refining, Bharti Airtel to telecom, DMart to retail. None is a diversified conglomerate.
- Reliance's multiples use gross revenue; the peers' revenue basis is not documented in the workbook.
- Peer share prices and shares outstanding are typed inputs and should be checked against dated market data.
- DMart's 37.04× EV/EBITDA reflects a high-growth retail rating and would distort any simple average; no peer median or comps-implied value is computed.

Source: Trading_comps (respective FY2025–26 annual reports and market prices on the stated valuation date, per workbook). Reliance net debt, revenue and EBITDA link to Historical_financials. Workbook interpretation: "Reliance's EV/EBITDA multiple is below those of Bharti Airtel and Avenue Supermarts in this selected peer set."

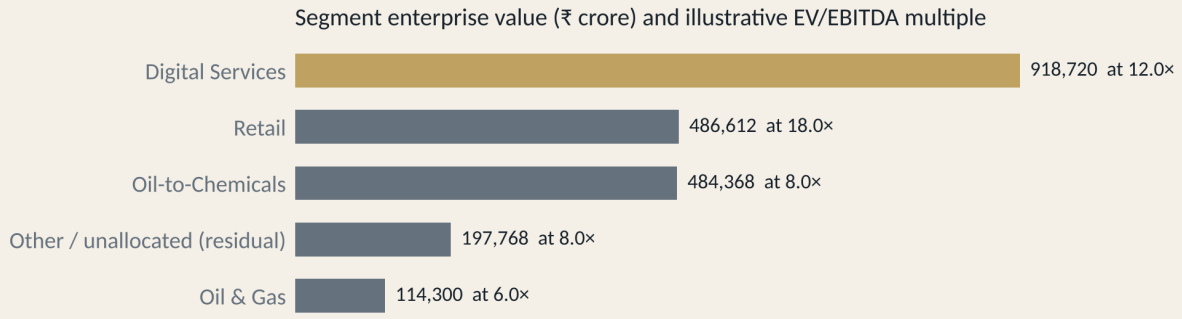

8 · SUM-OF-THE-PARTS VALUATION

Digital Services is the largest SOTP component at ₹918,720 cr, but every segment multiple is an illustrative assumption

Segment EV of ₹2,201,768 cr less consolidated net debt gives equity value of ₹2,077,051 cr — a framework awaiting peer validation, not a market-derived fair value.

Segment	EV / EBITDA	Segment EBITDA	Segment EV
Oil-to-Chemicals	8.0× *	60,546	484,368
Oil & Gas	6.0× *	19,050	114,300
Retail	18.0× *	27,034	486,612
Digital Services	**12.0× ***	**76,560**	**918,720**
Other / Unallocated (Residual)	8.0× *	24,721 ‡	197,768
Total segment enterprise value		**207,911**	**2,201,768**
Less: net debt (FY2026)			(124,717)
Implied equity value			**2,077,051**

** Illustrative multiple; requires peer validation. ‡ Residual = consolidated EBITDA less the four listed segments; typed as a value; requires reconciliation.*

INTERPRETATION

Digital Services (12.0×) and Retail (18.0×) are the two largest components on these multiples, at ₹918,720 cr and ₹486,612 cr of segment EV. Because the SOTP equity value (₹2,077,051 cr) sits far above the DCF result (₹716,044 cr), the choice of multiples — not the segment EBITDA — is what drives the gap between the two methods.

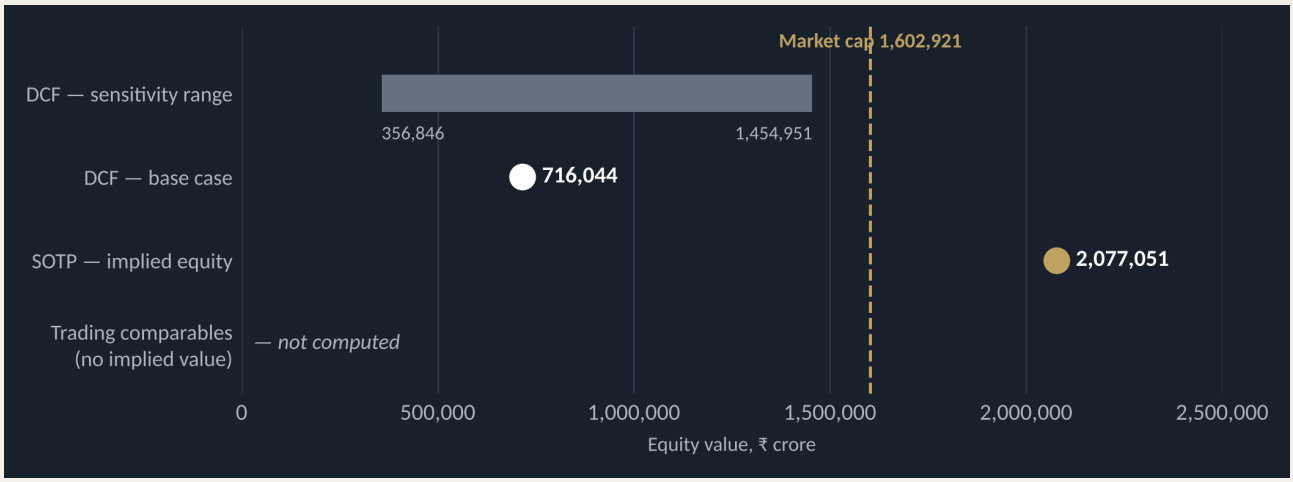

ILLUSTRATIVE. The segment multiples are the analyst's assumptions, not verified peer trading multiples. Segment EBITDA is typed inside the EV formulas (e.g. =60546*B5) rather than referenced from column C, and no deduction is made for minority interests in subsidiaries.

Source: SOTP_valuation; net debt links to Historical_financials!G15. Valuation output.

9 · VALUATION COMPARISON

Market capitalisation sits between the two method outputs and above the entire DCF sensitivity range

Shown side by side, not blended: the DCF reflects the model's cash-flow view, the SOTP reflects illustrative segment multiples, and the comps sheet yields no implied value.

Method	Equity value (₹ cr)	Basis	Confidence in inputs
DCF — base case	716,044	UFCF FY2027E–31E; WACC 10.0%, g 4.0%	Provisional WACC and tax; TV 77% of EV
DCF — sensitivity range	356,846 – 1,454,951	WACC 9–13%, terminal growth 2–6%	Static grid
Sum-of-the-parts	2,077,051	Segment EBITDA × EV/EBITDA, less net debt	Illustrative multiples
Trading comparables	Not computed	Reliance at 8.31× EV/EBITDA vs peers	Single-segment peers
Market capitalisation	1,602,921	Share price × shares outstanding	Reference, not a method

INTERPRETATION

The two methods answer different questions. The DCF asks what the forecast cash flows are worth at a 10% cost of capital; under the current capex and margin assumptions, it values the equity well below the market. The SOTP asks what each business might be worth at multiples the analyst considers appropriate; it values the equity well above the market. Neither is presented as fair value. Narrowing the gap requires a market-based WACC, a view on long-run capex intensity and peer-validated segment multiples.

Source: DCF!B19, SOTP_valuation!D13, Trading_comps!B9 and B15, Sensitivity_checks (lowest and highest cells). No blended value is presented.

10 · RISKS AND MODEL LIMITATIONS

Value is most exposed to the discount rate, the terminal assumptions and the unvalidated SOTP multiples

Ranked by how directly each input feeds the outputs. Status records what the workbook itself says about each one.

Assumption or limitation	Base case	Evidence in the model	Status
WACC	10.0%	At 4.0% growth, 9% / 11% WACC gives ₹887,064 cr / ₹593,959 cr; not yet built up from cost of equity and debt.	PROVISIONAL
Terminal growth	4.0%	Terminal value is 77.0% of enterprise value.	PROVISIONAL
Capex vs D&A;	10.5% vs 4.9%	Held constant through FY2031E, so the terminal year carries heavy reinvestment into perpetuity.	ANCHORED
Revenue growth and margin	8.0% / 17.5%	Flat for five years; history shows a margin dip to 17.1% in FY2025.	ANCHORED
Tax rate and working capital	25.0% / 5.0%	Neither is verified against Reliance's history.	PROVISIONAL
SOTP multiples	8.0× · 6.0× · 18.0× · 12.0× · 8.0×	Analyst assumptions; the residual segment's EBITDA is a typed plug.	ILLUSTRATIVE
Minority interests	—	Neither the DCF nor the SOTP deducts non-controlling interests or adds investments.	NOT MODELLED
Sensitivity grid	5 × 5	Stored as values; it will not move if any assumption changes.	STATIC
Peer set and market data	3 peers	Single-segment peers; prices and share counts are typed inputs to be verified.	HARD-CODED

WHAT WOULD STRENGTHEN THE MODEL

- Build WACC from a market-based cost of equity, an after-tax cost of debt and target capital structure, and link DCF!B11:B12 to the Assumptions sheet.
- Test a terminal year in which capex converges towards D&A;, and document the result alongside the base case.
- Replace illustrative SOTP multiples with peer-derived ranges, reconcile the residual segment EBITDA to the annual report, and deduct minority interests.
- Convert the sensitivity grid to a live Excel data table, and add per-share values and a comps-implied range if the analysis is to support a price view.

Source: Assumptions rationale column, DCF, Sensitivity_checks, SOTP_valuation and Trading_comps sheets. Interpretation by the author; no values have been recalculated.

11 · CONCLUSION

The model is internally consistent. Its conclusions are only as firm as three inputs.

No method is presented as verified fair value. This is an academic valuation exercise, not an investment recommendation.

WHAT THE MODEL SUPPORTS

- Five years of reported growth in revenue and EBITDA, with operating cash flow covering capex from FY2024.
- A mechanically sound DCF: arithmetic ties out from UFCF to equity value of ₹716,044 cr.
- A framework showing value concentrated in Digital Services and Retail at the chosen multiples.

WHAT REMAINS UNCERTAIN

- Whether 10.0% WACC and 4.0% growth are right — terminal value is 77.0% of EV.
- Whether capex should converge toward D&A; in the terminal year rather than stay at 10.5% of revenue.
- Market-derived SOTP multiples, minority-interest adjustments and a comps-implied value — none are in the workbook yet.

Source of all figures: author's valuation workbook. Academic exercise; not an investment recommendation.

12 · SOURCES, METHODOLOGY AND MODEL INTEGRITY

One source of numbers, eight open items

All figures come from the author's valuation workbook. External sources below are those the workbook cites; none were independently re-verified for this report.

Data	Source as cited in the workbook
Historical Financials	Reliance Industries Limited Annual Reports, FY2021–22 to FY2025–26
Segment Analysis	Reliance Industries Limited Integrated Annual Report FY2025–26
Comparable Companies	Respective company annual reports for FY2025–26 and market-price sources on the stated valuation date
Market Data	Share prices and shares outstanding should be verified against dated market data and company disclosures

METHODOLOGY

DCF — unlevered free cash flow (NOPAT + D&A; − capex − Δ working capital) for FY2027E–FY2031E, discounted at WACC with end-year discounting; perpetuity-growth terminal value; less FY2026 net debt. **Trading comparables** — EV/Revenue and EV/EBITDA from market capitalisation plus net debt. **SOTP** — FY2026 segment EBITDA × illustrative EV/EBITDA multiples, less consolidated net debt.

MODEL INTEGRITY LOG — FLAGGED, NOT REPAIRED

#	Issue	Location
1	WACC and terminal growth typed in the DCF, not linked to Assumptions (values agree)	DCF!B11:B12
2	Sensitivity grid stored as static values, not a data table	Sensitivity_checks!B5:F9
3	Segment EBITDA typed inside EV formulas; residual EBITDA is a typed plug	SOTP_valuation!C9, D5:D8
4	FY2026A working-capital change set to 0; FY2026A D&A; typed	Forecast!B9, B14
5	No minority-interest deduction; no per-share value	DCF, SOTP_valuation
6	'Comparable Company Valuation' listed as a method but no implied value computed	Cover, Trading_comps
7	Reliance multiples use gross revenue; peers' revenue basis not documented	Trading_comps!B12:E12
8	Rationale cites FY2026 growth ≈9.75%; model computes 9.78%. Label typo 'Interpretatation'	Assumptions!D4; Trading_comps!A21
